This is a great sized allotment on the Northern side of Moonta. There is a small shed with galv rain water tank and inside that shed is the off grid solar infrastructure, complete with battery bank providing plenty of 240v power. There is a sewer connection point at the front of the block and water is running past but not yet connected to the block. Mains power is also available from the pole out the front..... but why would you when the offgrid system is here ready to connect? Poly tanks shown in the picture are excluded from the sale! Further information available on request by calling the sales agent David Bussenschutt on 0429 692 511.
