\$572,000 UNDER CONSTRUCTION - COMPLETION OCTOBER

This is a brand new design which complies with the recently introduced Livable Housing Design Standard. This is a new Building Standard which means the homes better meet the needs of older people or people with mobility issues. So what's that mean, it means bigger doorways, no step access, big walk in shower with no glass in main bathroom, grab rail provisions in the building structure for future grab rail installation, and nice wide hallways. The home is under construction and can be secured with a deposit with the balance payable on completion. You can follow our progress as we update the construction photos on [realestate.com](https://www.realestate.com) every week or two. If you start to like what you see don't hesitate to long as in the current market all our homes are selling while they are still under construction. People are snapping them up before completion. For more information please send an enquiry or contact Ray for more detailed information or to organise an inspection of the home while under construction.
